RETAIL DISPLAY & NAVIGATION SYSTEMS

Endless Possibilities

Custom fabricated lightboxes have a multitude of applications, including interior and exterior graphic walls, trade show and retail displays, exhibitions and donor recognition programs. In addition to a range of standard size lightboxes, ID Signsystems can build custom fabricated lightboxes in any size, shape or graphic approach. Lightboxes can be integrated into fixtures, signs and displays.

Fabricated in any depth over 3.75" (85mm), custom lightboxes can be created with dye-sublimated printed stretch fabric or more durable Plexiglas surfaces. In addition, customized lighting approaches can be used, including DMX controlled RGB lighting that can be easily changed or made into a dynamic color system.
