VIA SYSTEM FINGERPOSTS

Single and Double Fingerposts

The Via sign system is a stylish yet cost effective range of wayfinding signage. The modular system comprises fingerposts, monoliths and wall mounted signs which are constructed using robust materials to withstand the street environment. Each product can be customized to suit a variety of settings.

The Via system can:

- provide wayfinding information to pedestrians in busy areas
- coordinate transport information, with places of interest and distance / walking time
- denote different regions through distinct finishes with unique colors or custom designs
- be easily maintained with a proprietary retention socket mounting system

A wide array of customization options makes Via a versatile, cost effective and flexible system to suit your brand's needs. Use color coding to tie locations to maps and customize the pole with paint or engraving to tie in your branding.

Modular fingers can be replaced if information changes or the sign is damaged. And the shot peened stainless steel posts are extremely durable, resistant to scratching and provide low reflectivity.

VIA SYSTEM FINGERPOSTS

Details

Fingerposts allow you to display a large amount of directional information clearly and succinctly. Each post can carry up to five fingerposts at intervals of 45 degrees.

Double depth fingerposts have all the benefits of standard fingerposts with additional capacity for dual language text provided by the 6" deep fingers. Fingers can be finished with anti-graffiti lacquer for protection.

	SINGLE	DOUBLE
POSTS	316 stainless steel satin polished or shot peened or 304 stainless steel polyester powder coated	
FINGERS	Extruded aluminum with either powder coated or anodised finish Up to 5 levels of single depth fingerposts positioned at variables of 45 degrees	Up to 3 levels of double depth fingerposts positioned at variables of 45 degrees
